SUMMARY

Software/Security Engineer with backend, frontend, cloud (AWS), DevOps, security, and data engineering experience at Amazon Prime Video, building scalable services, reusable tooling, and abuse and piracy detection systems that protect customer and partner data. Uses AI-assisted development tools (Kiro, Claude Code, OpenAI Codex, Grok, Copilot) to accelerate designing, building, testing, and debugging.

EXPERIENCE

Software Development Engineer - Apprentice **Jun 2025 - Jul 2026**

Amazon - *Seattle, WA*

- Designed and built **Consensus Review**, a two-person approval library in **TypeScript** and **React** for the tier-1 Service Resilience Portal (components, modal, and API), protecting service metadata quality and giving service owners and leadership accurate data and change tracking, using Claude Code and Kiro; adopted by Service Catalog and Operational Readiness Review.
- Built a **design system** and tested and debugged the Resilience Portal, finding potential bugs and failures, using Claude Code and Kiro.
- Designed and implemented an internal **privacy review library**, improving security compliance, customer error handling, and **maintainability** through backward compatibility across Prime Video services.
- Migrated metadata for **approximately 10,000 services** from **Amazon S3** to **DynamoDB**, consolidating automation workflows and reducing costs by **approximately 15%** and improving scalability.
- Built the self-service **registration API** that routes new input to storage (approximately **30-50 registrations per week**), safeguarded against customer data leakage; used AI to generate tests for the page and migration.
- Investigated content theft patterns with external providers and built **piracy detection tooling**, improving partner observability and response.
- Built **AWS Glue** jobs that store suspicious-activity and abusive-account data in a uniform format and securely transfer it to the account management team, protecting customer and partner **PII** and guiding security engineers' investigations; added a new abuse pattern that **closed a tracking gap** abusers used to evade detection.
- Automated monthly and quarterly business review dashboards (**QuickSight, Redshift, MySQL**) for privacy and security teams, cutting prep from **about 2 weeks to 1-3 days** and centralizing security data.
- Refactored **CI/CD** reporting pipelines, improving visibility into deployment bottlenecks and reducing time to detect release issues.

Backend Developer Intern **Jun 2023 - Sep 2023**

CITMIT (Construction Management Platform) - *La Jolla, CA*

- Optimized MySQL **performance** with indexing and query tuning (**30% faster**) and designed a caching layer that improved **scalability** by cutting peak database load by **approximately 20%**.
- Engineered a **fault-tolerant** automated disaster recovery pipeline with Bash and Amazon S3, improving backup reliability and restoration speed.

Sergeant | Administrative Manager | Squad Leader **Sep 2015 - Jan 2020**

U.S. Army - *Tacoma, WA & Pyeongtaek, South Korea*

- Led and mentored a cross-functional team of 15+ personnel, improving training effectiveness and promotion readiness.
- Managed **$750K+** of mission-critical equipment (**95% inspection pass rate**) and maintained accurate financial and dining facility documents, streamlining logistics planning to cut overhead.

SKILLS

- **AI-Assisted Development:** Kiro, Claude Code, Codex, GitHub Copilot, Cursor, Amazon Q Developer, Prompt Engineering, Spec-driven development, AI-assisted testing, AI code review, Agentic workflows, LLM APIs (Claude, ChatGPT), RAG, MCP
- **Languages & Frontend:** Python, Java, TypeScript, React, Next.js, JavaScript, Kotlin, C++, SQL, Bash, HTML/CSS, Redux, Responsive UI, Component libraries, Design systems
- **Backend & Systems:** Node.js, Express.js, Django, Flask, FastAPI, Spring Boot, REST APIs, GraphQL, Microservices, Distributed systems, Event-driven architecture, Caching (Redis), Message queues (SQS, Kafka), Scalability, Fault tolerance, Performance optimization, Maintainability, Reliability
- **Spoken Languages:** English (Fluent), Korean (Native)
- **Cloud & DevOps:** AWS (Lambda, API Gateway, ECS/EKS, EC2, S3, DynamoDB, Glue, Athena, Redshift, QuickSight, RDS, CloudWatch, IAM, CloudFormation, CDK, Secrets Manger), CI/CD (Jenkins, Github Actions, CodePipeline), Docker, Kubernetes, Terraform, Linux
- **Data & ML:** Data pipelines, ETL/ELT, Spark, Airflow, PostgreSQL, MySQL, NoSQL, DynamoDB, Data warehousing, Analytics
- **Security & Privacy:** PII protection, Data privacy, IAM and Access control, Encryption, Secrets management, Threat and Abuse detection, Fraud prevention, Anti-piracy automation, OWASP, Least privilege, Security Clearance (SECRET)
- **Testing & Practices:** Unit, Integration, and Regression testing, Jest, Junit, Pytest, Mockito, Test automation, Code review, SDLC, Agile, Design patterns, Software architecture, Operational readiness, Incident response

EDUCATION

University of California, San Diego (UCSD) – La Jolla, CA **Sep 2022 - Dec 2024**

Bachelor of Science in Mathematics-Computer Science
