## SUMMARY

Software Engineer experienced in backend systems, frontend development, developer platforms, infrastructure automation, and data-driven solutions at Amazon Prime Video. Skilled in building scalable services, reusable tooling, and self-service systems that improve engineering productivity, operational reliability, security, and incident response across large-scale distributed systems.

## EXPERIENCE

### Software Development Engineer - Apprentice

Jun 2025 - Jul 2026

#### Amazon - Seattle, WA

- Led the design and implementation of an internal privacy review library, improving security compliance, customer error handling, and backward compatibility across Prime Video services.
- Led service registration modernization by migrating service metadata from Amazon S3 to DynamoDB, consolidating automation workflows and reducing metadata storage and operational costs by approximately 40%.
- Refactored CI/CD reporting pipelines and executive dashboards, improving visibility into deployment bottlenecks and reducing time to detect release issues.
- Built automated business data pipelines with validation and testing, enabling centralized, reliable reporting for internal analytics and operational decision-making.
- Investigated content theft patterns and partnered with external content providers to develop internal detection tooling, improving piracy detection, partner observability, and operational response.
- Designed and implemented a centralized content abuse intelligence pipeline, streamlining offender management and strengthening customer and partner protection across Prime Video.
- Executed platform modernization initiatives, including JDK 17 upgrades and Gradle migration, improving runtime performance, build consistency, and long-term maintainability.

### Backend Developer Intern

Jun 2023 - Sep 2023

#### CITMIT (Construction Management Platform) - La Jolla, CA

- Optimized MySQL performance through indexing and query optimization, reducing execution time by 30% and improving application responsiveness.
- Designed a distributed caching layer that reduced peak database load by 50% and improved application scalability.
- Engineered an automated disaster recovery pipeline using Bash and Amazon S3, improving backup reliability and enabling rapid data restoration.

### Software Engineering Intern

Jun 2021 - Aug 2021

#### Tech for Good Inc. - Boston, MA

- Developed a blockchain-based donation platform using Solidity and JavaScript to provide transparent, immutable transaction tracking.
- Designed and audited secure smart contracts, implementing validation safeguards that eliminated identified fraudulent transaction vectors.
- Optimized PostgreSQL schema and query performance, reducing transaction verification latency by 40%.

### Sergeant | Administrative Manager | Squad Leader

Sep 2015 - Jan 2020

#### U.S. Army - Tacoma, WA & Pyeongtaek, South Korea

- Led and mentored a cross-functional team of 15+ personnel, improving training effectiveness and contributing to a 20% promotion rate within the squad.
- Managed inventory and maintenance operations for over \$3M in mission-critical equipment, achieving a 95% inspection pass rate through preventative maintenance planning.
- Streamlined logistics and resource planning processes, reducing operational overhead by 20% while supporting regional mission readiness.

## SKILL

- **Programming Language:** Python, Java, Kotlin, C++, JavaScript, TypeScript, SQL, Solidity
- **Frontend:** React, TypeScript, JavaScript, HTML, CSS, responsive UI development, component-based architecture, state management
- **Backend & Systems:** Scalable system design, distributed systems, microservices, REST APIs, Node.js, Express.js, Django, API integration, workflow automation, reliability engineering, availability engineering, incident response
- **Cloud, Infrastructure & DevOps:** AWS (S3, DynamoDB, Glue, Athena, Redshift, CloudWatch, IAM, CloudFormation, Secrets Manager, SageMaker AI), CI/CD, Linux, Bash, Infrastructure as Code (IaC)
- **Data & AI/ML:** Data pipelines, ETL, PostgreSQL, MySQL, DynamoDB, Amazon Redshift, Glue, data analytics, machine learning, NumPy, Pandas, Scikit-learn, TensorFlow, Matplotlib, fraud detection, abuse detection
- **Security & Privacy:** Privacy engineering, security engineering, anti-piracy automation, fraud prevention, threat assessment, security guardrails, Security Clearance (SECRET)
- **Testing & Quality:** Unit testing, integration testing, test automation, regression testing, debugging, performance optimization
- **Development Practices:** SDLC, software architecture, design patterns, operational readiness
- **Languages:** English (Fluent), Korean (Native)

## EDUCATION

### University of California, San Diego (UCSD) - La Jolla, CA

Sep 2022 - Dec 2024

Bachelor of Science in **Mathematics-Computer Science**
